## FaciliTech Has Green Solutions That Fit Any Budget

*Many businesses want to be environmentally friendly, but at the same time they must be fiscally responsible. FaciliTech can help any business reap the benefits of being "green" and still keep their budget out of the "red."*

### **Here are a few of the ways that FaciliTech can help your business implement "green" solutions the next time your systems need maintenance or upgrades:**

- Put your HVAC systems on a FaciliTech preventative maintenance schedule. Maintaining your equipment keeps it running optimally and longer.
- Let our electrical department install "smart strips" throughout your office to reduce energy waste. These power supplies make putting your computer on "standby" old school.
- FaciliTech's plumbers will check for plumbing leaks and repair drips that drain your budget. Just one leaky faucet can waste gallons of water every day.
- Our maintenance professionals can insulate your hot water heater and hot water pipes. This keeps the heat where it works more efficiently.
- Our plumber's can install low flow toilets and faucets, or at a minimum switch out the aerators. The only change you will notice is a lower water bill.
- Install new exterior doors with door sweeps. Keep outdoor heat & cold where they belong.
- Caulk or weatherstrip windows. Keep inside heat & cooling where it belongs.
- Install programmable thermostats. Automatically adjust temperatures according to the times your building is occupied.
- Replace your lightbulbs with longer lasting compact fluorescent bulbs. While these bulbs are a little more expensive, they will help to reduce energy cost & last longer.
- Install ceiling fans. In summer, keep cool air circulating to reduce stress on your mechanical systems and in winter, push heat away from the ceiling and down to where its needed - warming your feet.
- Let our general maintenance team plug up leaks in your outlets & switchplates. Even small leaks can inflate your energy costs and are too often overlooked.
- Install motion detected lighting and timers. Lighting turns off and on as needed without having to remind the last person to "turn out the lights!"

**To find out if your mechanical, electrical and plumbing systems are operating as efficiently as possible, contact FaciliTech Services to set up an energy audit for your office or building.**
